EMERGENCY DEPARTMENT (ED) VISITS FOR OPIOID OVERDOSE: August 2017

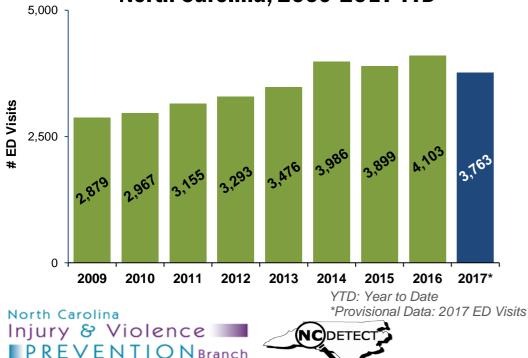

646 Opioid overdose ED visits August 2017

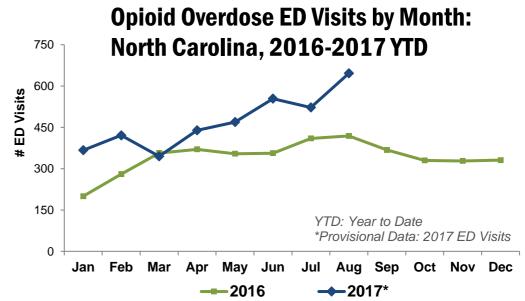

Compared to 419 August 2016

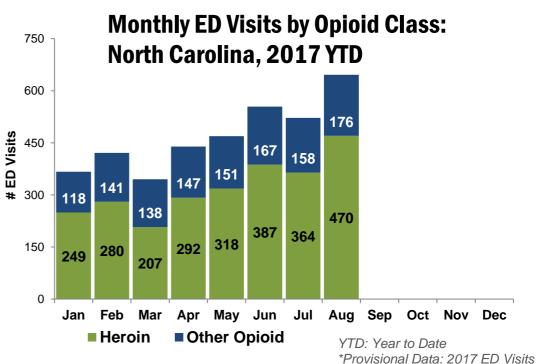

Source: NC DETECT: ED; Syndrome: Overdose: Opioid Overdose (ICD-9/10-CM)

Note: Counts based on diagnosis (ICD-9/10-CM code) of an opioid overdose of any intent (accidental, intentional, assault, and undetermined) for North Carolina residents. Opioid overdose cases include poisonings with opium, heroin, opioids, methadone, and other synthetic narcotics.

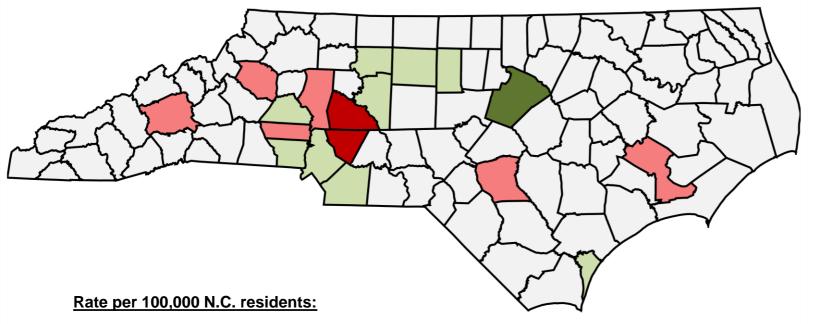

Opioid Overdose ED Visits by Year: North Carolina, 2009-2017 YTD

Rate of Opioid Overdose ED Visits by County: August 2017

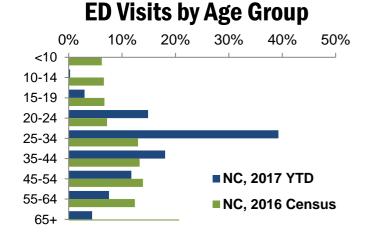

□ Suppressed (<10 cases) ■ 1.0 to 4.9 ■ 5.0 to 9.9 ■ 10.0 to 19.9 ■ ≥20.0 Powered by Bing © GeoNames, Navteq

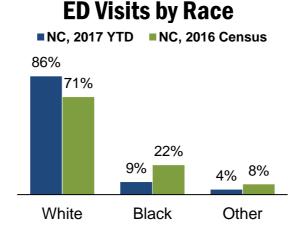

Highest Rates of Opioid
Overdose ED Visits by County:
August 2017

	August ZOII		
	County	Count	Rate
	Cabarrus*	53	26.3
	Rowan	32	22.9
	Lincoln	14	17.2
	Caldwell	10	12.3
	Craven*	12	11.6
	Iredell*	20	11.6
C	Cumberland*	34	10.4
	Buncombe	26	10.2
Ne	ew Hanover*	22	9.8
M	lecklenburg*	96	9.1

Note: Rate per 100,000 N.C. residents
Rates not shown for counties <10 cases
* ≥5 overdoses this month compared to
last month

Demographics of 2017 YTD Opioid Overdose ED Visits Compared to the 2016 NC Standard Population

Demographic data from the North Carolina census provide population-level context for potential disparities by age or race among opioid overdose ED visits.

In North Carolina, ED visits for opioid overdose occur predominately among whites, and those ages 25-34 years if age.

NOTE: The North Carolina Disease Event Tracking and Epidemiologic Collection Tool (NC DETECT) is North Carolina's statewide syndromic surveillance system. For training on NCDETECT, contact Amy Ising, ising@ad.unc.edu.

Emergency department visit data from NC DETECT are provisional and should not be considered final. There may be data quality issues affecting our counts: counties with <10 cases may not be true lack of opioid overdose cases but data quality issues; additionally, some hospitals use non-specific poisoning codes rather than specific opioid poisoning codes. NC DETECT reports five categories of race: White, Black, American Indian, Asian, or Other. Due to low counts, Asian, American Indian, and Other races have been collapsed into a single category.
