Reminders about formula imported from other countries:

The FDA is allowing additional brands of infant formula to be imported from outside the United States during the shortage. The formulas included on these tables may be imported and may be available in some stores. When using imported formulas, remember the following guidance:

- Follow the mixing instructions on the product label. These instructions may be very different from what you are used to. Some instructions will be in metric units. For more information, review the FDA's [Tips for Preparing Imported Infant Formula](#).
- Do not try to purchase formula from another country yourself, because you can't be sure it meets U.S. safety standards. Rely on what has been approved by the FDA. Contact your pediatrician if you are unsure if a formula has been properly imported.
- Imported formulas may be labeled as "Stage 1" (for the first six months after birth, but generally can be used throughout the first year), and "Stage 2" (just for babies who are over 6 months of age).
- The [American Academy of Pediatrics](#) also has helpful guidance on using imported formula.
- For additional information, visit the [FDA's Imported Formula website](#).
